Dear Jean:

I have your fax of May 26 asking about the availability of monitoring equipment for possible cabin air quality tests.

My understanding is that the two briefcase samplers that have been ordered for Helmut Gaisch have been fabricated and are waiting to be shipped. I have been told that the delay in shipment has been in completing the paperwork needed to export the samplers. Tom Osdene told me last week that he planned to try to make sure that the necessary paperwork is completed promptly.

I do not know whether anyone in Dr. Gaisch's shop has been trained to use the briefcase samplers but expect that they either have been or are satisfied that they do not need training (for the most part, the sampler uses rather conventional components). Dr. Osdene undoubtedly could advise the scientists at Neuchatel if that should be needed.

Additionally, at a meeting that Dr. Osdene and I attended last week in Washington we were shown a new personal nicotine monitor that is available for purchase. You might want to ask Dr. Osdene to give you some details of that monitor.

That leaves, of course, the question of whom should analyze the results -- following use either of the briefcase sampler or a personal nicotine monitor. Again, you may want to put that question directly to Dr. Osdene. I would think,

2501046662A

more importantly, that leaves out which commercial firm is to conduct the tests (take samples)

however, that IT Corporation -- which is performing that function here -- could perform the same function for you if a laboratory cannot be identified promptly in Europe.

Best wishes.

Sincerely,

John P. Rupp
